

# SUN SHADES FOR OFFICES

## Sun shades for offices, assembly rooms, shops, etc.

To feel good and work effectively, you need the right lighting and room temperature. The light must provide glare-free illumination that allows the eye to work normally, and the temperature must be around 18–20°C since that is the range at which people are most effective. When sunlight enters a room through the windows it increases the luminous power and creates glare, and the temperature rises above the comfort level. Performance levels fall and workers become uncomfortable.

There are many types of sun screens available. Curtains, roller blinds and Venetian blinds block the light, but allow temperatures to rise and spoil the view. Awnings are affected by wind and weather, and are often useless in windy conditions.

## Bergaflex reduces solar energy by up to 90 %

Bergaflex sun shades reduce solar energy by up to 90 %, cut out the light to a level that is comfortable for the eye and eliminate screen glare.

Our sun shades therefore represent a valuable and cost-effective investment in the work environment.

Bergaflex sun shades are available in different degrees of heat reflection and light transmission, and in a range of colour combinations (see separate datasheet).

## 35 years of experience of solar protection

Bergaflex was founded more than 35 years ago. Since the 1980s, the company has supplied sun shades and metallised films for the windows on ship bridges around the world. Our products are vital for safety at sea and for the welfare of personnel.

For more information on Bergaflex solar protection systems, please contact us or see our website!

Authorised distributors:

*Work effectively with the correct lighting and temperature.*

*Bergaflex sun shades reduce solar energy by up to 90%.*
