Dominik Zumbühl, MSc ETH Environ. Sc
Head of Project Management MESPAS AG

Imagine a world in which all crucial information reaches all crucial people in a systematic, highly reliable and timely way... That's the world of mespas R5 Document Management.

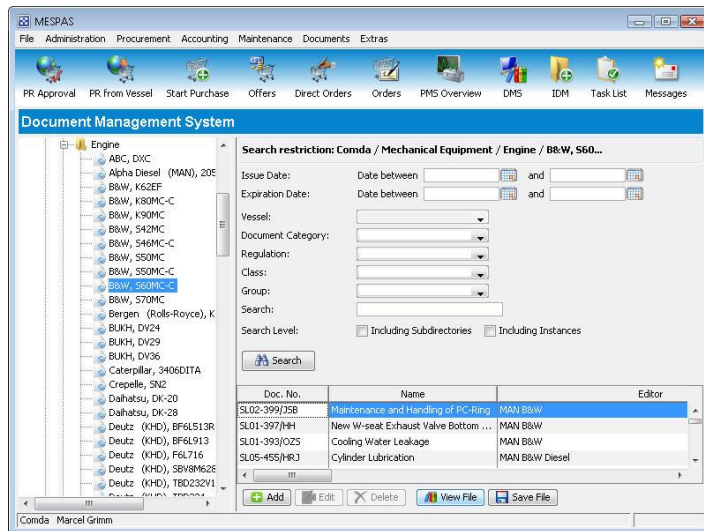

mespas R5 Fleet Management Software

Document Management

INTEGRATED AND CUSTOMIZED

mespas R5 allows you to organize all your fleet's documents in a central database. Documents submitted to your central database are automatically distributed to your corresponding vessels.

Such a workflow makes it obsolete for you to manage multiple recipients lists and multiple document inventories respectively.

SYSTEM FEATURES

The mespas R5 software...

- automatically synchronizes documents between the central server, vessels and the office.

The shipowner's office and vessel users...

- consult documents from different modules within the system (PMS, procurement, etc.).
- submit and update documents.
- enhance a document's description by adding metadata.

Manage your fleet, not just your ships...

MESPAS is a Swiss-based software solution and service provider for managing technical installations such as marine fleets and industrial installations.

It was founded in 2000 by marine engineers, software engineers and venture capitalists.
