Area Sales Manager MESPAS AG

mespas R5's integrated stock control helps optimizing a company's stock - not only on a per-ship-basis, but across the entire fleet.

# Stock Control

## INTEGRATED AND CUSTOMIZED

The constant feedback from the vessels, listing the parts in stock, provides an overview of the stock for the entire fleet and shows which parts are below minimum stock.

The key issue of stock control is to identify the fast and slow moving parts with the objective of establishing optimum stock levels for each category, thereby minimizing cash tied up.

## SYSTEM FEATURES

### The mespas R5 software...

- indicates stock levels by color codes.
- integrates with procurement module (automatic stock updates upon confirmed delivery).
- records all stock movements.

### The shipowner's office users...

- define what parts are under stock control (definition valid for entire fleet).
- set minimum and maximum quantities for parts.
- overview stock per vessel and across the entire fleet.

### The shipowner's vessel users...

- overview the vessel's stock.
- manage stock movements exclusively.
- initiate purchase requests.

### Manage your fleet, not just your ships...

MESPAS is a Swiss-based software solution and service provider for managing technical installations such as marine fleets and industrial installations.

It was founded in 2000 by marine engineers, software engineers and venture capitalists.
